Projects

InfluConnect: Influencer Collaboration Platform | MERN, Socket.io

- Built a MERN-based platform connecting businesses and influencers for campaign collaborations and contract management.
- Implemented JWT authentication, email verification, password reset, and role-based control.
- Developed real-time chat using Socket.io with typing indicators, seen status, and media sharing.
- Integrated influencer search filters, review & rating system.

SplitMate: Expense Splitting Web App | MERN, Socket.io, Recharts

[Source Code](#)

- Built a full-stack expense sharing application for groups with equal, exact and percentage-based bill splitting.
- Implemented **debt simplification algorithms and settlement tracking to minimize transactions between users.**
- Added real-time notifications using Socket.io and interactive spending dashboards with charts.
- Developed Secure JWT authentication with responsive UI and group management features.

Portfolio: Showcasing Skills, Projects and Education | React.js, CSS

[Source Code](#)

- Built a personal portfolio website using React.js, Custom css.
- Created a responsive design that works across desktop, tablet and mobile devices.
- .Developed sections for Projects, Skills, About, Education and Contact.
- Integrated a contact form with a REST API for message submission.
- Successfully deployed the project on GitHub Pages, making it publicly accessible.
